

Reclaim Control Over your secrets

End to end protection for secrets and programmatic access to cloud services and data

Secret sprawl is a challenge organizations large and small grapple with as their cloud-native stack expands.

The Need

- R&D teams create and scatter secrets across vaults, code, collaboration solutions, and more without any oversight or control by security teams.
- Vaults and Secrets Scanners don't provide the much-needed context or protection over secrets.
- Secret-based breaches are among the top three attack vectors and the most DESTRUCTIVE breach type to an organization.

The Solution

Entro puts an air tag on your secrets

From the moment a secret is created and until it's deleted - we will find it, classify it and safeguard it. Entro provides you with:

- Secrets inventory: Know how many secrets you have and where they are.
- Secrets classification and enrichment: Visualize your secrets usage, understand which application is using what secret to access what cloud service and additional vital secret information
- Continuous monitoring of secrets activities for anomalous behaviors, control access, and prevention of sensitive information being leaked

Armed with this insight, your security team has all it needs to prevent external and insider threats and protect your organization's most valuable assets.

What are secrets?

Secrets are the programmatic access keys applications use to access cloud services such as databases, storage and more

Reduce secret risks, accelerate remediation and save the security and development teams time and money

What to Expect

- Govern any secret from a single pane of glass - Proactively identify, prioritize, remediate and prevent risks compromising your business.
- Visualize and track the activity of all secrets. Comprehensive secret discovery across all organization's solutions.
- Understand risk and eliminate false positives - As secrets are used across the supply chain and in production, Entro monitors the usage of these secrets looking for any suspicious behavior.
- Agentless and frictionless. R&D agnostic.

Secrets protection designed for security teams
